The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 53 and 55 are rejected under 35 U.S.C. 103(a) as being unpatentable over Neef et al.

It would have been obvious to use an adhesive to hold the pieces together since adhesives are used in a wide variety of applications where permanent securement is desired.

Claims 1, 30 and 52-65 are rejected under 35 U.S.C. 103(a) as being unpatentable over Neef et al in view of Tyree et al 4530561.

Neef et al substantially discloses the claimed invention, including (Figure 6) a female edge connector having end pieces 70, 72 and center piece 12, each piece having contacts therein and polarization features (unnumbered parallel bars on top); and male edge connector (Figures 7 and 8) with the same features. The pieces are joined together by rear modules 14, 15, 74. Neef et al, however, does not disclose laterally extending hold-down tabs (laterally extending first and second mounting extensions). Tyree et al discloses laterally extending hold-down tabs (mounting extensions) 2, and to provide Neef et al with laterally extending hold-down tabs (mounting extensions) thus would have been obvious, to better secure the connector to a substrate. It would have been obvious to use an adhesive to hold the pieces of Neef

et al together since adhesives are used in a wide variety of applications where permanent securement is desired.

Applicant's arguments filed February 3, 2006 have been fully considered but they are not persuasive. Tyree et al discloses the obviousness of using laterally extending hold-down tabs (mounting extensions). The meaning of "staggered" in the claims is rather broad and deemed to be met by the applied references.

All claims are drawn to the same invention claimed in the application prior to the entry of the submission under 37 CFR 1.114 and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the application prior to entry under 37 CFR 1.114. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action after the filing of a request for continued examination and the submission under 37 CFR 1.114. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
